## **Elberta**

Semi-dwarf. This spreading tree produces large, firm peaches ripening late August. Golden yellow blushed with red. A freestone peach that is self-fertile and resistant to brown rot.

*H: 10-14' W: 8-12' Zones: 5-8*

## **Redhaven**

Semi-dwarf. Heavy bearing, well-formed tree. Resists cold and is tolerant to leaf spot. This vigorous grower ripens in late July in Zone 6. Beautiful red and golden yellow, medium-sized fruit is round, uniform and appealing. Disease-resistant and self-fertile.

*Zones: 5-8*

## **Reliance**

Standard. One of the hardiest of all peaches, ripens mid to late August with greenish yellow coloring and a slight blush of red. Flesh is bright yellow, soft and juicy. Good for fresh eating, especially in colder climates. Freestone and self-fertile.

*Zones: 4-8*

## **Santa Rosa Plum**

Semi-dwarf. This Japanese variety is a vigorous, fast growing plant that produces large crops of beefy, round fruit with thin, purple-red skin. This tart, sweet fruit ripens in mid-August and is excellent for fresh eating and canning.

*Zones: 5-8*
